Logic
intransparent

not self-
explanatory

Ordering system

Filtering Logic

Qualitative Evaluation Conclusions

- Onboarding Screen confusing
→ Increase Consistency, Explanation
- Users unsure about system status
→ Give more Feedback
- Order Logic not clear yet
→ Rename, Reposition
- Food Filtering Logic unclear
→ More Transparency and Help

Prototype Live Demo

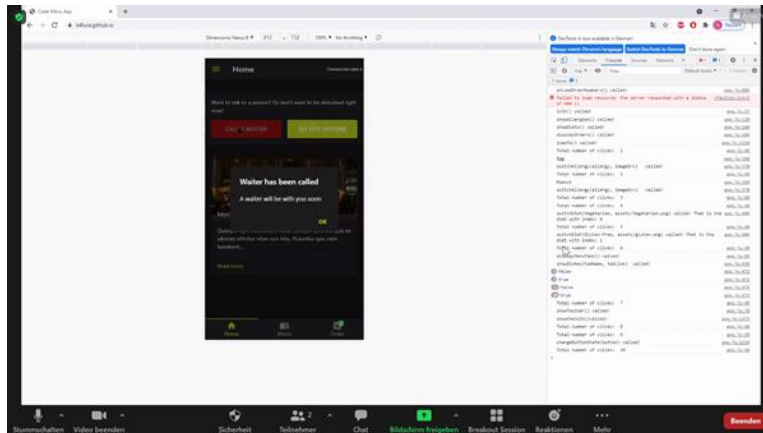

Quantitative Evaluation

Hypotheses:

1. The user should be able to order food within 15 seconds
2. They can achieve their goals efficiently.
3. The app is accessible and accommodates to all types of users.
4. The app recognises, respects and caters to the users needs by helping them apply those needs in the restaurant.
5. The prototype achieves at least a score of 80 in the evaluation with the SUS.

Measurements:

- Time to complete task
- Number of clicks
- Number of errors
- Number of positive and negative statements towards the system
- Number of users completing task successfully (w/o assistance)
- Number of system features user remembers afterwards
- System Usability Scale (SUS)

Procedure:

1. Setup
2. Demographic Information
3. Scenario
4. Test Cases
5. SUS
6. Follow Up Question

Setup:

- Zoom + Screen Sharing
- Chrome w/ open Console
- Nexus 6
- Image and Sound Recording
- Thinking Aloud Method
